Renea,

As we discussed this morning, You and others in the DW Section are preparing briefing materials for Mary regarding the results of the PFAS sampling in GA. The results show detectable levels for PFAS compounds in the surface water near the LAS, and you have been tasked with formulating "next steps" for Mary to consider for GA EPD.

One possible discussion topic might be the possible unauthorized point source discharge of SW at the LAS.

Based on information in ICIS, I was not able to find where the LAS site was covered under an NPDES permit for Stormwater. I did find where two of the three POTWs that send effluent to the LAS were apparently covered under a general permit for stormwater. However, I was not able to determine if the LAS site was included in any of these tow GP coverages. If the LAS site is having a discharge of stormwater to waters of the US, that would be a CWA violation.

There is some information onsite that would be helpful in determining if they are violating the LAS permit (i.e., non-NPDES permit that allows them to land apply effluent). See the highlighted text, below.

Please keep me abreast of the upcoming Briefing with Mary, and please include Carla Dollar on the invite. She is the lead NPDES Pretreatment and POTW NPDES staff member.

I am headed over to GA EPD this morning to view hard copies of the records, since the files were too voluminous to send via email. See, below.

1. Operating and Monitoring reports (OMR)
2. Discharge Monitoring Reports (DMR)
3. Design and Development Report (DDR)
4. Any reports that include the required calculation of the Antecedent Precipitation Index (API), which is used to determine soil saturation. Based on the LAS permit (GAJ020056), the facility should not exceed an API value of 3.2 during summer months (May-Oct) and 2.0 during winter months (Nov-April). Please note that the LAS permit does not include units for precipitation (I assume the units are inches.)
5. Any reports that include the required calculation for the Critical Precipitation Intensity (CPI), which the permit requires to be monitored on an hourly basis with each precipitation event. It is my understanding that the permit prohibits spray irrigation if the CPI equals, or exceeds, a value of 1.0 inch per hour based on a rainfall of 30 minutes (i.e., 0.5 inches of rainfall in 30 minutes).

Hi, Karrie-Jo:

Did you ever hear back from GAEPD on your questions below re: Loopers Bend?

We need to circle back up as a team to discuss our next steps on this case. With 3M getting a lot of attention right now, I want to make sure this doesn't get lost in the shuffle since many of us are working both cases.

Thanks,
Suzanne

Karrie-Jo,

Correct, based on my limited research and file review, it does not appear a wastewater NPDES discharge permit was ever issued for this site and it has been a LAS system.

I will forward your request to the Compliance Office, as they receive the DMRs and OMRs and have staff locate the design development report in our files.

Please let me know if you have any comments or concerns.

Best Regards

OK, and thanks for looking into this.

Based on my understanding, your electronic records indicate a high probability that there was never an NPDES permit for the LAS. Is this correct right?

If possible, please send me the following Dalton Utility LAS reports for the past 3 years:

1. Operating and Monitoring reports (OMR)
2. Discharge Monitoring Reports (DMR)
3. Design and Development Report (DDR)

4. Any reports that include the required calculation of the Antecedent Precipitation Index (API), which is used to determine soil saturation. Based on the LAS permit (GAJ020056), the facility should not exceed an API value of 3.2 during summer months (May-Oct) and 2.0 during winter months (Nov-April). Please note that the LAS permit does not include units for precipitation (I assume the units are inches.)
5. Any reports that include the required calculation for the Critical Precipitation Intensity (CPI), which the permit requires to be monitored on an hourly basis with each precipitation event. It is my understanding that the permit prohibits spray irrigation if the CPI equals, or exceeds, a value of 1.0 inch per hour based on a rainfall of 30 minutes (i.e., 0.5 inches of rainfall in 30 minutes).

Thanks for your help.

Karrie-Jo

The permit number referenced appears to be old nomenclature (GAU) that was used to enter LAS permits into our data system and it is no longer used. As permits were reissued we updated the nomenclature for all LAS permits to begin with GAJxxxxxx. The 020056 number is assigned to the GAJ020056 - Dalton Utilities (Riverbend WPCP) Land Application System located at Riverbend Road Dalton, GA 30721.

Please let me know if you have any comments or concerns.

Audra,

Can you send me a copy of GAU020056 (minor industrial?), which I understand expired on 3/25/2012 and was not renewed by Dalton Utilities? I want to see what types of discharges were covered under this individual permit.

Thanks.

Thanks for your response, Cameron.

EPA's ECHO website shows that the Dalton LAS had a SW permit no. GAU020056, but it expired on 3/25/2012. How are the SW discharges from the LAS currently handled?
